

The distribution digits of pi

The first line starts with the number of digits tested followed by the count of each digit 0 through 9. The second line has the percent that each digit is found for 0 through 9. For the first two lines is a test for the first 100 digits of pi less the first 3. The number 0 is found 8 times which 8.000% of the total 100 digits is. In the seventh set which starts with the 700 the 0 digit is found 64 times and is 9.142% percent of the total 700 digits. By 2000 the numbers hugs the 10% value fairly well. The following table is for 1,000,000 digits of pi in 100 digits increment.

I have brought up the very last line which has a count for the number of times a digit reached or exceeded the 10% level I thought it might have been better results, than it end up with. I also brought up the results of the 1,000,000 line and you can see how close to 10% each number ending up being used.

| | | | | | | | | | | |
|---------|--------|--------|---------|---------|---------|---------|--------|--------|--------|---------|
| 1000000 | 99959 | 99758 | 100026 | 100229 | 100230 | 100359 | 99548 | 99800 | 99985 | 100106 |
| | 9.996% | 9.976% | 10.003% | 10.023% | 10.023% | 10.036% | 9.955% | 9.980% | 9.998% | 10.011% |

Here is a check on how many times a 100 digit group makes it to 10% or above. The digit 2 comes in at only 579 times missing 9,421 times but ended being over 10% and only 5 came near the 10,000 mark only missing 8 times, they are all in the beginning and are located at 100, 300, 400, 600, 700, 800, 900 and 1000.

|------|------|-----|------|------|------|-----|------|------|------|
| 4376 | 4806 | 579 | 6908 | 6820 | 9992 | 979 | 6321 | 4220 | 2180 |
|------|------|-----|------|------|------|-----|------|------|------|

Pushing the limits to 10,000,000 and there are changes each digit is now very close to 10% see the next two lines. The third line is the number of times each digit reached 10% or greater, note 5 has changed its number. The 2 has also changed it is no longer at the bottom while 4, 7, and 9 are at the top. A more extended table can be seen starting on page 431 through 436.

Here is a check on how many times a 100 digit group makes it to 10% or above. The digit 2 comes in at only 579 times and only 5 came near the 10,000 mark.

| | | | | | | | | | |
|------|------|-----|------|------|------|-----|------|------|------|
| 4376 | 4806 | 579 | 6908 | 6820 | 9992 | 979 | 6321 | 4220 | 2180 |
|------|------|-----|------|------|------|-----|------|------|------|

This is a snap shot of all three lines for every 100,000 digits of PI. The first line is the number of times a digit is used in PI. The second line give the percent that digit is used in PI. The third line tells how many time the 100 digits reached or exceeded 10%, look at the number 6 it peaked out by 200,000.

| Number /Percent | 0 % | 1 % | 2 % | 3 % | 4 % | 5 % | 6 % | 7 % | 8 % | 9 % |
